

105100 Integrated Scale Kit

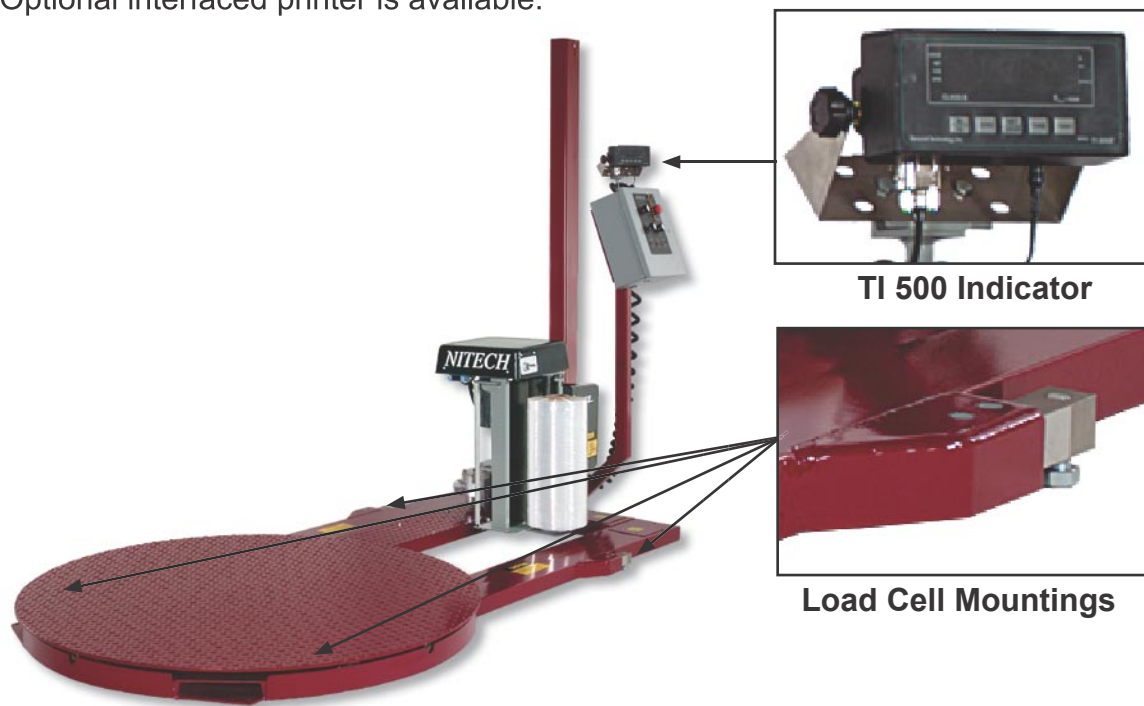

The integrated scale package consists of (4) load cells under the table giving the machine a slightly higher load height. The scale load cells are mounted to the frame of the machine raising the load height about 1/4" above the current load height of 14 5/8" (high profile) and 3 5/8" (low Profile). This scale is integrated into the wrapper, which allows the operator to pick the machine up on the turntable end and transport the stretch wrapper without disengaging anything. The TI 500 indicator is mounted on top of the control panel for easy access and can be swiveled towards the wrapper so the operator can see the weight of the product as they unload. Machine capacities: Low profile / 5,000lbs. High profile / 4,000lbs.

Scale Kit Materials (high & low profiles)

- TI500 Indicator
- 4 Heavy duty load cells are rated at 10,000 lbs. each which eliminates problems from shock loading.
- 4 Heavy-duty mounting brackets for load cells are integrated into base of frame.
- 4 Superfoot mounting feet under each load cell.

TI 500 Indicator Features

6-digit display, zero key, auto-tare, print options, membrane key pad, selectable units in pounds or kilograms, gross net, selectable calibration enables user to easily switch between different applications. This scale is estimated weight only and has an accuracy of 0.1% of applied load. Optional interfaced printer is available.
